

Memory Dots

This activity helps you remember what you see. Spots on a grid pattern will light up in sequences and you have to be able to remember the correct order in which they lit up.

Step 1. 3 dots

The computer will flash dots on a grid and you have to remember the order in which they flashed.

Click on the '**Activity**' tab at the top of this window. A grid with five dots like the one shown below will be on the screen.

Click on '**start**' in the bottom right corner of the screen. One of the five dots will flash a different colour for 1/4 of a second then another dot will flash for the same time, followed by another dot. You have to remember which dot flashed first, which was second and which was last. Wait for the dots to finish flashing then show the order in which they flashed by left clicking with your mouse on the grid. For example, if the first dot to flash is the top left, click on the top left dot on the screen, if the second dot to flash is the middle, click on the middle dot...etc

When you have clicked on all the dots on the grid on the screen, click on '**check**' to see if you were correct.

Your goal is to get at least 4 out of 5 correct.

Step 2. 4 dots

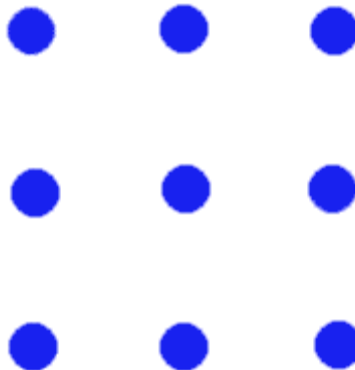

Click on '**number**' at the top left of the activity screen and click on '**4 dots**'. Now four dots will flash one after another. Click on '**start**' again at the bottom left of the screen. Wait for the dots to finish flashing then show the order in which they flashed by clicking on the grid on the screen.

When you can get at least 4 out of 5 correct, try 5 dots by clicking on the number button and changing the number to 5 dots.

Your goal is to get 4 or more correct out of 5.

Step 3. Larger grid

Now there will be 3X3 dot grid on the screen.

Click on '**level**' at the top left of the screen and click on '**level 2**'. The grid with 9 dots will be on the screen. Click on '**start**'. Now 4 of the dots on the grid will flash in a sequence and you have to remember the correct order in which they flashed. Wait for the dots to finish flashing then show the order by clicking on the dots on the grid on the screen. Then click on '**check**' to see if you were correct.

Your goal is to get 4 or more correct out of 5.

Now click on '**number**' and click on '**5**'. Now 5 dots will flash one after the other and you can show the order in which they flashed.

When you are getting 4 or more correct out of 5, try 6 dots by again clicking on '**number**' and changing to 6.

Your goal is to get 4 or more correct out of 5.
