

Finger Thinking 4

This activity helps you to develop finger movements that are directed by your eyes.

Step 1. Coin pass

Your helper gives you a 20 cent coin. The object of this game is to pass the coin from one hand to the other using only the thumbs and fingers.

Your helper will show you how to hold the coin in one hand between the tips of their **thumb and first finger**. They will show you the following sequence:

1. With the coin between the tips of the thumb and first finger of the right hand, move the thumb and finger back so the coin **touches the palm** of the right hand.
2. Pass the coin to the tips of the thumb and first finger **of the left hand** and again touch the palm of the left hand with the coin.
3. Pass the coin back to the right hand, but this time to the tips of the **second finger and thumb** then touch the palm again with the coin.
4. Pass the coin to the left hand, to the second finger and thumb, then touch the palm with the coin.
5. Pass the coin to the right hand, but now to the **thumb and third finger**. Touch the palm with the coin and pass back to the thumb and third finger of the left hand. Touch the palm with the coin.
6. Pass the coin to the right hand, to the **thumb and little finger**. Touch the palm and pass back to the thumb and little finger of the left hand and again touch the palm with the coin.

Now you try to pass the coin using fingers and thumb, from one hand to the other. Ideally, only the fingers holding the coin should move.
