

Eye Tracing

This activity helps your attention and concentration. You have to follow lines on the computer screen, with just your eyes, to find where they go.

Step 1. Follow the road

Click on '**level**' and click on '**level 1**' on the menu at the top of the screen. Click on '**next**' at the bottom of the screen.

Four mazes of lines will be shown on the screen. There are 3 intertwining lines in each maze, each one beginning on the left side, with a letter at the start of the line. Each line twists around the other lines and connects to a number on the right side. You have to start at the letter 'A' and follow the line from it, with only your eyes. Try to keep your eyes on the line so you can find out which number it goes to. When your eyes get to the end of the line, tell your helper the number at the end of that line.

Now start the next line which begins with 'B', follow it along with your eyes and tell your helper the number at the end of the line. Then follow the third line. When you have followed all 3 lines and told your helper the number they connect to, trace each line with your finger, across the screen, from the letter to the number to check if you were correct. Then do the other three mazes in the same way.

Click on '**next**' to show another group of four mazes of lines then follow the lines in each maze, with your eyes, to find out where each line ends.

Turning on Your Brain 2

Your goal is to correctly find the number that each line connects to, at least 9 times out of 10.

When this is easy; click on 'level' and click on 'level 2' and continue. Level 2 is more difficult and it will take you longer to follow the lines.

When you find this easy, change to level '3', which is the most difficult.
