

Finger Thinking 2

This activity helps you to develop finger movements that are directed by your eyes.

Step 1. Paper scrunch

Your helper gives you child a piece of paper, such as an old newspaper sheet. You have to scrunch the paper up into a ball, using only the fingers and thumb of one hand. Start using the same hand you use to write. The other hand should not touch the paper and the paper cannot be rested on any surface, such as a table, or against your body.

Now you have to unravel the screwed up piece of paper using **only the thumb and fingers of one hand** and not resting the paper on any surface or against yourself. You cannot shake the paper to help you unravel it. Try to make the paper as flat as possible.
